PROJECTS

- **Blog app**

Blog app, the front-end is responsible for rendering the user interface and interacting with the user. The back-end handles data storage, authentication, and other server-side logic. Blog apps can use a variety of technologies for the front-end and back-end, such as Angular for the front-end and Firebase for the back-end.

- **Simple Illustrator Project**

simple illustrator is vector-based graphic design software that is widely used by graphic designers and professionals in various industries.

- **ChatApp**

The ChatApp is designed to provide a seamless messaging experience for users, with a user-friendly interface that allows users to easily send and receive messages. Users can log in and start chatting with other users instantly.
